                                                              yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysaccharide materials such as paper,
                                                                                                                                                                                                                             The present invention relates to methods and compositions for cross-
linking and/or modifying the properties of polysaccharide materials.
The method involves treating the polysaccharide structure with a
polysaccharide binding domain (PBD) fusion protein. The method is

This sequence encodes a luciferase of the invention. The invention relates to Renilla mulleri, Gaussia and Pleuromamma luciferase and Renilla and Ptilosarcus green fluorescent protein (GFP) nucleic aci proteins. The luciferases and GFPs can be used in bioluminescence-generating systems, assays, screening methods, diag method and articles of manufacture. They can be expressed using

assays, screening methods, diagnostic

acids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The patent discloses sea pansy (Renilla reniformis) green fluorescent proteins (GFP) and their corresponding polynucleotides. The invention calso relates to sequences of the bioluminescence generating system (e.g. luciferase). R. reniformis GFP are used in diagnostic methods and in the production of novelty items such as toys (e.g. squirt gun, complete gun, toy "Halloween" eggs, toy cigarettes, board/card game covs), finger paints, slinny play material, bubbles in bubble making toys, fishing lures, dolls, sparklers, magic wand toys, balloons, compared to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the major to the

                                                                                                                                                                                                     The present invention relates to methods and compositions for cross-
CC linking and/or modifying the polysaccharide structure with a
CC linking and/or modifying the polysaccharide structure with a
CC polysaccharide binding domain (PBD) fusion protein. The method is
CC polysaccharide binding domain (PBD) fusion protein. The method is
CC used to alter the structural, chemical, physical, electrical and
CC mechanical properties of polysaccharide materials such as paper,
CC yarns, fibers and textiles, using biological crosslinking agents.
CC The polysaccharide containing materials have improved mechanical
CC properties such as wet strengths, durability and elasticity. The PBD
CC reagent is applied in the forming stage in fluting paper manufacture
CC which eliminates the sizing step. The use of a biological crosslinker
CC improves the recyclability of paper products. The PBD reagent maintains
CC the fine fibers in a slurry therefore resulting in better recovery of
CC raw materials. The PBD molecules are eluted by strong alkaline conditions
CC which enhances the ability of the alkaline glue used in binding to
                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ф
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Q
                                                                         This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly poikilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents a PCR primer used in the cloning and optimisation of the P. salmonis OspA gene. The OspA gene is used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1005

                                                                                                                                                                                              This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly poikilothermic fish, against the bacterial pathogen particularly poikilothermic fish, against the bacterial pathogen salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRB) and other rickettsial diseases. The present sequence represents a PCR primer used in the cloning and optimisation of the P. salmonis OspA gene. The OspA gene is used in the method of the
                                                                                                                                                                                                                                                                                                                                                                            Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis

                                                                                                                                                                                                                                                                                                           This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a p. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly poikilothermic fish, against the bacterial pathogen p. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents a PCR primer used in the cloning and optimisation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Piscirickettsia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Poikilothermic fish; Pisciric vaccine; OspA; salmonid ricke SRS; 17E2; fusion construct;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a palmonis specific antigen termed OspA, or an immunogenic fragment of pospA in the form of a vaccine. The method is used for protecting animals, OspA in the form the interface of the particularly polkilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen in the protecting animals, as almonis. The method is also useful for protecting against salmonid protecting. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents the amino acid sequence of C17E2, a p. salmonis OspA construct optimised for expression in Escherichia coii, fused to an undefined N-terminal fusion partner. The fusion protein is used in a vaccine to create an anti-OspA antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (BURI/) BURIAN J.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Pisciriokettsia salmonis. The method comprises administering an immunogenic amount of a salmonis specific antigen termed OspA, or an immunogenic fragment of p. salmonis specific antigen termed OspA, or an immunogenic fragment of p. salmonis polkilothermic fish, against the bacterial pathogen particularly polkilothermic fish, against the bacterial pathogen particularly. The method is also useful for protecting against salmonid p. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents optimised p. salmonis OspA protein 17E2. The DNA sequence represents optimised p. salmonis OspA protein 17E2. The DNA encoding OspA 17E2 (AARB6247) has been optimised for expression in Ecsherichia coli. An OspA protein with an N-terminal fusion partner is Ecsherichia coli. An OspA protein with an N-terminal fusion partner is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-SEP-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, particularly polkilothermic fish against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid fickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents P. salmonis OspA protein. An OspA protein with an Neturnian fusion partner is used in a vaccine to create an anti-OspA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (KAYW/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to methods and compositions for cross-cc linking and/or modifying the properties of polysaccharide materials. CC The method involves treating the polysaccharide structure with a cpolysaccharide structure with a cc polysaccharide binding domain (PBD) fusion protein. The method is cc used to alter the structural, chemical, physical, electrical and cc mechanical properties of polysaccharide materials such as paper, cc yarns, fibers and textiles, using biological crosslinking agents. CC The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD cc properties such as wet strengths, durability and elasticity. The PBD cc properties such as set the sizing step. The use of a biological crosslinker cc improves the recyclability of paper products. The PBD reagent maintains ct the fine fibers in a slurry therefore resulting in better recovery of the fine fibers in a slurry therefore resulting in better recovery of c which enhances the ability of the alkaline glue used in binding to remembrate names.

The present invention relates to methods and compositions for cross-
Clinking and/or modifying the properties of polysaccharide materials.
Clinking and/or modifying the properties of polysaccharide materials.
Clinking and/or modifying the properties of polysaccharide structure with a
Clinking and involves treating the polysaccharide structural. The method is
Clinking poperties of polysaccharide materials such as paper,
Clinking in the structural properties of polysaccharide containing materials have improved mechanical
Clinking polysaccharide containing materials have improved mechanical
Clinking polysaccharide containing materials have improved mechanical
Clinking polysaccharide containing materials have improved mechanical
Clinking polysaccharide containing materials have improved mechanical
Clinking polysaccharide the strengths, durability and elasticity. The PBD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The method involves treating the polysaccharide structure with a polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fine fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is Clostridium cellulovorans cellulose binding domain (CBD) cross linker protein (CCP).

Note: This sequence is stated to be the same as that shown as SEQ ID NO: 6 in the sequence listing of the specification. However this sequence has an additional residue at its C-terminal.

AAAAA72917/R63634 is a novel isolated cellulose binding domain. It pref. Collinds crystalline with a Kd ranging from 1.5 microm. 0.5 microm. Collings pref. with a Kd of <1.2 microm, esp. <1.0 microm. The protein and Collings pref. With a Kd of <1.2 microm, esp. <1.0 microm. The protein and Collings pref. Comprising the CBD and a second protein. The second protein is pref. Comprising the CBD and a second protein. The second protein of degrading Comprising the CBD and a second protein. The second protein of degrading Comprising the CBD collings. Constructive of the collings of this. The CBD and FP CHSP-related protein or an antigenic portion of this. The CBD and FP CHSP-related protein or an antigenic portion of this. The CBD and FP CHSP-related protein or an antigenic portion of this. The CBD and FP CHSP-related protein call disprostic may be used in drug delivery, affinity sepns. and diagnostic cell collings. CBD nucleic acid may be obtd. from a variety of cell Conversible manner or that produce CBD encoding mRNA. The preferred CRSP cource of CBD encoding nucleic acid is C. cellulovorans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δÃ

The present invention relates to methods and compositions for cross-cC linking and/or modifylng the properties of polysaccharide materials. CC The method involves treating the polysaccharide structure with a CC polysaccharide binding domain (PBD) fusion protein. The method is CC mechanical properties of polysaccharide materials such as paper. CC mechanical properties of polysaccharide materials such as papers. CC yarns, fibers and textiles, using biological crosslinking agents. CC yarns, fibers and textiles, using biological crosslinking agents. CC properties such as wet strengths, durability and elasticity. The PBD CC properties such as wet strengths, durability and elasticity. The PBD CC properties such as wet strengths, because in fluting paper manufacture reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker cc improves the recyclability of paper products. The PBD reagent maintains cc improves the recyclability of paper products. The pBD reagent maintains the fibers in a slurry therefore resulting in better recovery of the fine fibers in a slurry therefore resulting in better recovery of competence and the pBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to consider the pBD molecules are eluted by strong alkaline conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  В

                                                                                                                                                                                                                                                                                       polysaccharide binding domain (PBD) fusion protein. The method is used to alter the structural, chemical, physical, electrical and mechanical properties of polysaccharide materials such as paper, yarns, fibers and textiles, using biological crosslinking agents. The polysaccharide containing materials have improved mechanical properties such as wet strengths, durability and elasticity. The PBD reagent is applied in the forming stage in fluting paper manufacture which eliminates the sizing step. The use of a biological crosslinker improves the recyclability of paper products. The PBD reagent maintains the fibers in a slurry therefore resulting in better recovery of raw materials. The PBD molecules are eluted by strong alkaline conditions which enhances the ability of the alkaline glue used in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (CBDT-)
                                                                                                                                                                                            binding domain (ProtA-CBD). This sequence contains a part of CBP A protein and a part of protein A derived from PRIT2T vector sequence Note: This sequence is stated to be the same as that shown as SEQ ID NO: 8 in the sequence listing of the specification. However this sequence has 2 additional residues at its C-terminal.

Cellulose binding domain; CBD; CbpA; fusion protein; diagnosis; HSP; immunoassay; heat-shock protein; cross reactive protein; detection; antigenic fragment; antibody; insulin-dependent diabetes mellitus; cellulose; chitin; cellulolytic; amorphogenic.
                                                                                                                                This sequence represents a cellulose binding domain (CBD) derived from the CbpA protein of Clostridium cellulovorans. The sequence is used the construction of a fusion protein which can be used in diagnostic immunoassays, e.g. to detect heat-shock proteins (HSP) and their cross-reactive proteins, antigenic fragments or HSP-specific antibodies (which indicate insulin-dependent diabetes mellitus, or susceptibility (which indicate insulin-dependent for the cellulose (including to it. The CBD, has very high affinity for cellulose (including to it. The CBD) and chitin (dissociation constant 0.8-1.4 mu M), but crystalline forms) and chitin (dissociation constant 0.8-1.4 mu M), but crystalline forms) and chitin (dissociation activities. The CBD binds over has almost no cellulolytic or amorphogenic activities. The CBD binds over has almost no cellulolytic or amorphogenic activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Detection of a specific analyte by reaction with binding agent fused to cellulose binding domain - and subsequent treatment with cellulose and reaction of insoluble product with a label specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MSVEFYNSNKSAQTNSITPIIKITNTSDSDLNLNDVKVRYYYTSDGTQGQTFWCDHAGAL 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                05-JAN-1999
                                                                                                                                                                                                                                                                                                                                           This sequence represents a fusion protein (CBD-Kpn1) composed of the Cbf protein cellulose binding domain (CBD) from Clostridium cellulovorans protein cellulose binding domain (CBD) from Clostridium cellulovorans from the protein sused in diagnostic immunoassays, e.g. to detect the constant of the constant constant constant constant constant constant constant constant constant constant constant constant constant to it. The CBD has very high affinity for cellulose (including crystalline forms) and chitin affinity for cellulose (including crystalline forms) and chitin constant 0.8-1.4 mu M), but has almost no cellulolytic or (dissociation constant 0.8-1.4 mu M), but has almost no cellulolytic or composed cactivities. The CBD binds over a wide pH range and is not camorphogenic activities. The CBD binds over a wide pH range and is not released from cellulose to cellulolytic or released from cellulose to cellulolytic constant 0.8-1.4 mu M).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-OCT-1994;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       27-OCT-1994;

                                                                                                                                                                                             shock protein (HSP) fragment. This protein is used in diagnostic immunoassays, e.g. to detect heat-shock proteins (HSP) and their cross-reactive proteins, antigenic fragments or HSP-specific antibodies (which indicate insulin-dependent diabetes mellitus, or susceptibility to it. The CBD has very high affinity for cellulose (including crystalline forms) and chitin (dissociation constant 0.8-1.4 mu M), but has almost no cellulolytic or amorphogenic activities. The CBD binds over
                                                                                                                                                                                                                                                                            This sequence represents a fusion protein composed of the CbpA protein cellulose binding domain (CBD) from Clostridium cellulovorans and a he shock protein (HSP) fragment. This protein is used in diagnostic

                                                                                                                                                                                                                                                                                                                                                             A modified cellulose binding domain (CBD) or fraction of it, linked to a hapten molety via one or more Cys or Lys residues and complexe comprising the biotinylated CBD and a biotin-binding molecule selected from modified or unmodified avidin or streptavidin or an anti-biotin antibody, can be used in affinity chromatography, cell separation, cell, protein and enzyme immobilisation, selective removal of biological materials, multienzyme reactors, signal immunoassays and drug (e.g. pesticide) delivery. The CBD molecule can be modified with the hapten without affecting its high affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cellulose binding domain; CBD; hapten; moiety; biotin; avidin; streptavidin; affinity chromatography; cell separation, cell immobilisation; protein immobilisation; enzyme immobilisa multienzyme reactors; signal immunoassays; drug delivery; pest cellulose.
